PROFESSIONAL SUMMARY

2026 Computer Science (Data Science) graduate from Bengaluru, currently a data analyst intern at Avacasa on a real estate and hospitality market study. Works with SQL, Power BI, Python and dbt, with projects on a BigQuery and dbt data pipeline, an e-commerce funnel and profitability app (Streamlit), and a geospatial service-gap analysis of Bengaluru bus stops. Microsoft Certified: Power BI Data Analyst (PL-300).

EDUCATION

Bachelor of Engineering in Computer Science and Engineering (Data Science) 2022–2026
Sai Vidya Institute of Technology, Bengaluru CGPA: 8.81/10

TECHNICAL SKILLS

- **Databases & Querying:** SQL (Advanced SQL, Joins, Window Functions, CTEs), Microsoft SQL Server, Google BigQuery.
- **Business Intelligence (BI):** Power BI, DAX, Power Query, Excel (Pivot Tables, XLOOKUP/VLOOKUP, SUMIFS/COUNTIFS, charts), Dashboard Design, Dimensional Modeling, Star Schemas.
- **Programming:** Python (Pandas, NumPy, Matplotlib, Seaborn, Plotly).
- **Analytics & Modeling:** Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, KPI Design, Business Analytics.
- **Tools & Deployment:** dbt (Data Build Tool) Core, Streamlit, Git/GitHub, ELT Pipelines
- **Familiar With:** Tableau, GeoPandas, MySQL

EXPERIENCE

Data Analyst Intern | Avacasa **Oct 2026 - Present**

- Analyzing price per sq ft and short-term-rental pricing by micro-market for a real estate and hospitality deep dive on a location in India.
- Standardizing and validating the data for analysis, flagging duplicate broker posts, cross-location overlaps and false geographic matches (such as a place name resolving to another country) across ~22K raw property records and 195 short-term-rental listings.
- Building the dashboard and location dossier the sales team will use to update the website's location pages and adding YouTube API data to the analysis.
- Executed company-provided scraping pipelines and API pulls across 10+ sources (property portals, Airbnb, Booking.com, weather, Google Trends) and compiled a 26-site healthcare, education and tourism dataset with coordinates.

PROJECTS

Quick Commerce Operations Command Center *GitHub*

BigQuery, dbt Core, SQL, Power BI, Data Modeling, DAX

- **Developed** 21 dbt models on BigQuery (10 staging, 2 intermediate, 9 final) that turn 10 raw tables (11M+ rows) into a star schema of 3 dimension and 6 fact tables, with stage durations and 25-minute SLA flags.
- **Cleaned** the raw data in SQL: standardized timestamps from four formats, removed stray characters, turned blank and "NULL" text into real nulls, and removed duplicates with ROW_NUMBER (505,029 raw orders became 500,000).
- **Created** a 4-page Power BI dashboard (overview, SLA, drivers, stores) on 500K orders: 80.3% completed, 16.4% failed, 3.3% cancelled, and 53.8% of completed orders took over 25 minutes to deliver.
- **Analyzed** where time is lost: picking (6.3 min vs a 4-min target) and packing-to-pickup (6.1 vs 2) ran over target while transit stayed within it, and compared results by zone, distance, traffic and weather.

E-Commerce Business Intelligence & Funnel Analytics *Live Dashboard* | *GitHub*

Python, Streamlit, Pandas, Data Modeling, Plotly

- **Built** and deployed a 4-page Streamlit app (overview, funnel, returns, products) on 5 linked tables (451K events, 9.7K orders).
- **Split** each order's discount across its items so sales match at order and item level (₹10.66 Cr), giving ₹3.24 Cr gross profit (30.4% margin) by product.
- **Ran** funnel analysis by device, traffic source and region (8.4% of visits ended in a purchase; 74.2% of sessions that started checkout did not finish), and measured returns, keeping approved refunds (₹52 lakh) separate from pending ones (₹9.8 lakh).

BMTC Transit Accessibility & Service Gap Analysis *GitHub*

Python, GeoPandas, Power BI, DAX, SQL

- **Linked** 4,655 bus stops to routes with GeoPandas (50 m match, 100 m grouping) and ordered them along each route, creating a 114,608-row route-to-stop table the source data did not have.
- **Estimated** population within 1 km of each stop from a population raster (route totals count each cell once) and compared it with route and trip counts in a service gap analysis, flagging 413 stops (8.9%) where population ranks far above service.
- **Designed** a 2-page Power BI dashboard with DAX measures to explore stops and routes on a map: gap status, population groups, route length and ranked route lists.

CERTIFICATIONS & TRAINING

- **Microsoft Certified: Power BI Data Analyst Associate (PL-300)** | Microsoft 2026
- **dbt Fundamentals** | dbt Labs 2026
- **SQL (Advanced) Certificate** | HackerRank 2025
- **Data Analytics Internship, 16 weeks** | Swizosoft (OPC) Pvt. Ltd. Feb 2026 - May 2026

VOLUNTEERING

Member, Utkarsha Data Science Club SVIT (2024–2026)
Organized and supported technical events, coding activities, and workshops to strengthen departmental analytics culture.

ACHIEVEMENTS

- **1st Place -** Dept. of CSE (Data Science) - Major Project Expo 2025
- **HackerRank SQL Gold badge** (5-Star), 140+ SQL problems solved across HackerRank and LeetCode
- **1st Place -** SVIT Inter Branch Football Competition
