PROFESSIONAL SUMMARY

Data Analyst with hands-on experience across the modern data workflow, specializing in data preparation, dimensional modeling, and business intelligence. Proficient in using SQL, Python, dbt Core, and Power BI to extract, clean, and model complex relational datasets. Experienced in translating raw operational and geospatial data into diagnostic dashboards and clear business metrics.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering (Data Science) 2022–2026
Sai Vidya Institute of Technology, Bengaluru CGPA: 8.81

TECHNICAL SKILLS

- **Databases & Querying:** SQL (Advanced SQL, Joins, Window Functions, CTEs), MySQL, Microsoft SQL Server, Google BigQuery.
- **Business Intelligence (BI):** Power BI, DAX, Power Query, Tableau, Excel, Dashboard Design, Dimensional Modeling, Star Schemas.
- **Programming:** Python (Pandas, NumPy, Matplotlib, Seaborn, Plotly).
- **Analytics & Modeling:** Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, KPI Design, Business Analytics.
- **Tools & Deployment:** dbt (Data Build Tool) Core, Streamlit, Git/GitHub, ELT Pipelines

EXPERIENCE

Data Analyst Intern | Remote — Avacasa | Oct 2026 - Present

- Executed automated data extraction workflows using Python (Pandas) to aggregate, clean, and standardize real estate and hotel supply metrics for a local market deep dive.
- Computed cross source financial metrics such as net rental yields and developed an interactive dashboard currently used by the sales team to guide market decisions.
- Conducted regulatory auditing by capturing RERA registered project data directly from state portals to monitor compliance and litigation status.

Data Analytics Intern — Swizosoft Pvt. Ltd. | Feb 2026 - May 2026

- Designed the data logic and explainability framework for an Intelligent Anomaly Monitoring System during an intensive VTU academic training program, using Python to calculate 30 period rolling metrics and Z-scores for time-series sensor data.
- Wrote Python data transformation scripts for an E-Commerce Business Intelligence platform to enable the calculation of product level profitability and track return patterns.
- Built a rule based classification engine that categorized predictive alerts into five distinct business events (e.g., Spike, Level Shift) to support non-technical decision making.

PROJECTS

Quick Commerce Operations Command Center — GitHub

BigQuery, dbt Core, Power BI, Data Modeling, DAX

- **Built** a dimensional data pipeline using Google BigQuery and dbt Core to process, clean, and transform a 500,000 record operational dataset into a reporting-ready star schema comprising 9 distinct dimensional and fact tables.
- **Applied** advanced SQL within dbt models to handle data profiling, timestamp parsing, and grain aware deduplication across order, rider, and store fact tables.
- **Created** a multi-page Power BI dashboard to track delivery SLAs, identifying stage level delays and a strong correlation between larger basket quantities and increased picking durations.

E-Commerce Business Intelligence & Funnel Analytics — Live Dashboard | GitHub

Python, Streamlit, Pandas, Data Modeling, Plotly

- **Designed** a 5 table relational data model and deployed a comprehensive 4 page Streamlit diagnostic platform to analyze full cycle e-commerce performance from acquisition to post purchase.
- **Programmed** a behavioral funnel and mapping module to track user journeys, identifying a 61.3% checkout drop off and visualizing regional performance across volume, revenue, and friction metrics.
- **Formulated** profit allocation logic and post-purchase return diagnostics to measure financial leakage, segmenting inventory into a 4 quadrant matrix based on true net profitability and return risk.

BMTC Transit Accessibility & Service Gap Analysis — Github

Python, GeoPandas, Power BI, DAX, SQL

- **Performed** complex spatial joins using Python and GeoPandas to map 4,655 isolated transit stops to 4,009 routes within a 50 meter buffer, creating a relational dataset for mobility analysis.
- **Combined** transit records with external gridded population data to engineer a custom pressure index, identifying 627 specific bus stops with critical service imbalances.
- **Developed** a Power BI report using DAX filter context logic to map geospatial findings and prioritize actionable transit service gaps.

CERTIFICATIONS

- **Microsoft Certified: Power BI Data Analyst Associate | PL-300** (Microsoft) 2026
- **dbt Fundamentals** (dbt Labs) 2026
- **The Complete SQL Bootcamp** (Udemy) 2025

VOLUNTEERING

Member, Utkarsha Data Science Club SVIT (2024–2026)
Organized and supported technical events, coding activities, and workshops to strengthen departmental analytics culture.

ACHIEVEMENTS

- **1st Place -** Dept. Of CSE (Data Science) - MAJOR PROJECT EXPO 2025
- **1st Place -** SVIT Inter Branch Football Competition
